LDEQ ANSWERS TO PROPOSERS QUESTIONS
SFS No. 3901-12-06
“Leaking Underground Storage Tank (LUST) Post Hurricane Corrective
Action at Canik Oil Company”

LDEQ’s answers to the following questions are intended to provide information to potential bidders’ questions to SFS No. 3901-12-06.

Questions and answers that may potentially result in the disclosure of information from proposals of competing bidders will not be published.

Question 1: Will the department allow resampling prior to remediation and if the groundwater concentration is below the standard, allow site closure without additional sampling?

LDEQ’s answer: If the baseline sampling event at Canik Oil Company reveals that the 2-methylnaphthalene concentration in groundwater is below the limiting RECAP standard and further corrective action is not necessary, the Contractor would reach Milestones 1-5 (100%) COC reduction with that sampling event and should be paid accordingly. However, four consecutive quarters of groundwater monitoring will still be required to ensure that constituents of concern remain below the Limiting RECAP Standard (LRS) in order to meet Milestone 6.
